Description

CE-013 Servo Motor (Fixing holes to be prepared in the factory)

Please note: This part is not a direct replacement for CE-113.

Prior to ordering make sure you check what part is currently installed in your equipment.

Servo motors or “servos”, as they are known, are motors paired with a position encoder that provide position and speed feedback with high precision. They are controlled by a Servo drive which monitors the feedback from the servo motor and automatically adjusts its output to correct for differences between the commanded value and actual.

Note: Fixing holes to be prepared in the factory.
